

What is claimed is;

1. A motor supporting device comprising:

a motor accommodating section for accommodating and holding a motor therein, and

5 a gear holding section that rotatably holds a gear for externally transmitting a driving force of said motor,

wherein said motor supporting device further comprises a covering section, which is integrally formed with said motor accommodating section and flatly covers said gear holding section.

10

2. A motor supporting device according to claim 1, wherein said covering section is bendably formed with respect to said motor accommodating section, and comprises a side pressing section that abuts to the end portion of said gear provided to the motor drive  
15 shaft.

15

3. A motor supporting device according to claim 1 further comprising a fitting section for fixing said covering section to said motor accommodating section, with said side-pressing section being  
20 abutted to the end portion of said gear mounted to said motor drive shaft, said fitting section being provided to at least either one of said covering section and said motor accommodating section.

20

4. A motor supporting device according to claim 1 further comprising a fitting section for coupling the end portion of a support  
25 shaft that is formed in said gear holding section for rotatably holding the gear to said covering section, said fitting section being provided to at least either one of said covering section and the end portion of said support shaft.
